# IDUINO Extension Board Module for Screw Shield V3

Does a breadboard make you uncomfortable with your connections? Too much time spent in doing PCB? Here is the IDUINO Screw Shield V3. Use only a breadboard plug wire that can be screwed directly onto the terminal. It also increased the pin count for connections; it includes digital and analog pins with V(5V) and G (Ground) that is made for analog and digital sensor modules. It is compatible in Arduino Uno, Mega, Mega 2560 and Leonardo, and many more.
